

## Fuel System Cleaners (for gasoline and diesel vehicles)

*Powerfully clean the inside of the engine.  
Our products are used as genuine products  
by automobile manufacturers*

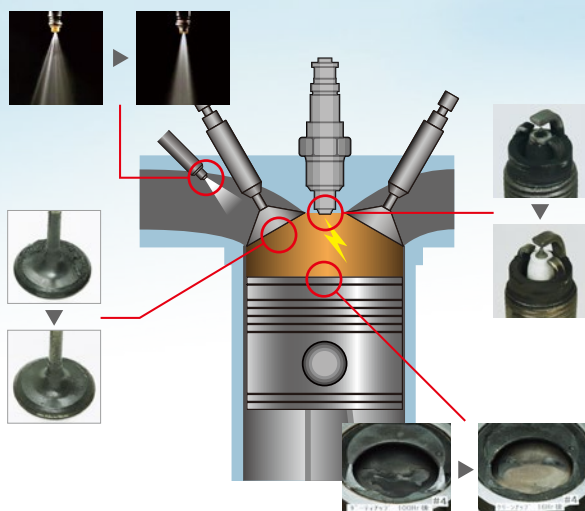

**Powerfully clean the fuel system inside the engine.  
High quality and reliability recognized by automobile manufacturers.  
Easy to apply, they improve acceleration and fuel efficiency  
and prevent engine troubles.**

- Strongly remove carbon deposits in the combustion chamber.
- Restore accelerator's response.
- Long-lasting cleaning action.
- Prevent engine performance from deteriorating.
- Used as genuine products by automobile manufacturers.
- Easy to use, just pour them in the fuel tank!

**Just pour them in the fuel tank.  
They will restore the engine to its original performance  
and if used regularly they are also effective in  
preventing engine troubles.**

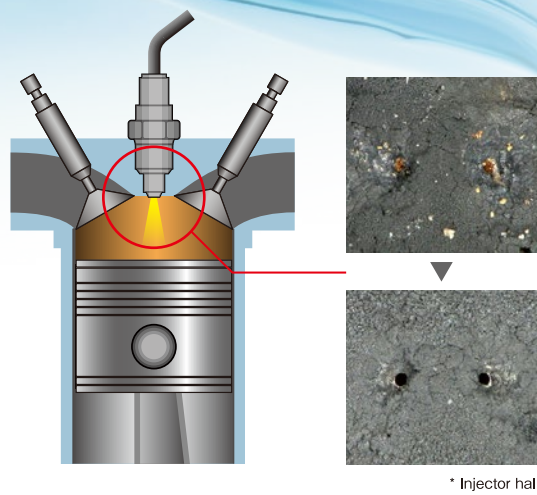

**For gasoline vehicles**

The accumulated of fuel impurities and soot from incomplete combustion form dirt deposits that have a negative impact on the engine. JAPAN CHEMICAL INDUSTRIES's Fuel System Cleaners are successful in removing at once oil-soluble and water-soluble deposits stuck to intake valves, injectors, spark plugs and combustion chambers thanks to two active ingredients.

**For diesel vehicles**

Due to the precise control on fuel injection exerted by the common rail type high-pressure fuel injection system introduced due to environmental concerns, even small deposits on the injector can hinder an engine's original performance. Against such deposits, the regular use of Fuel System Cleaners can prevent the deterioration of acceleration and of fuel efficiency.

**Engine Flush Additive (EFA)**

**Easy cleaning of engine oil lines**

Inside a vehicle engine, the sludge and varnish will be accumulated gradually in the course of normal use. And that leads to reduced fuel efficiency and reduced drivability.

Simply pouring EFA into the engine before an oil change and draining the old engine oil after idling makes it possible to remove dirt build-ups inside the engine, thus completely cleaning the oil lines.

Lineup of JAPAN CHEMICAL INDUSTRIES's fuel additives

Product name	Fuel System cleaner (for gasoline and diesel vehicles)	Engine flush additive
Capacity	100ml, 150ml, 200ml, 250ml, 300ml	300ml, 400ml, 500ml
Type	PET plastic, aluminum can	Tin can

\* For other sizes, please contact the appointed staff.
