

# Parts Cleaning

Specialized detergents / rust removers / Paint removers

*Remove dirt build-up with our custom-made cleaning solutions and restore the part's original shine!*

**We have long and proven track record in removing stains and rust from variously-shaped objects.**

**We will safely remove only dirt without damaging parts.**

**We have developed specialized cleaning solutions through multiple trials in response to diverse requests.**

- Specialized cleaning solutions created by receiving parts from clients and conducting thorough trials on them.
- By removing only dirt build-ups without affecting the parts, you can reuse the parts that would otherwise have to be replaced, thus reducing the burden on the environment.

Based on the technology and experience accumulated as an automobile chemical manufacturer, we analyze different types of dirt and propose the optimal specialized cleaning agent. Feel free to consult us on matters concerning non-automobile-related dirt deposits too.

### Case study

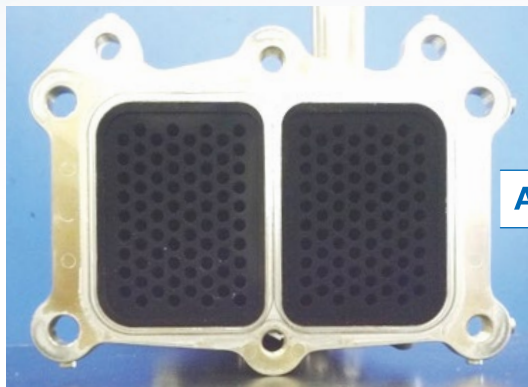

#### Request from customer

An EGR valve that has been used for many years is now covered with deposits and needs to be replaced. However, with new parts being expensive, the cost of replacing it would be very high. Can you help?

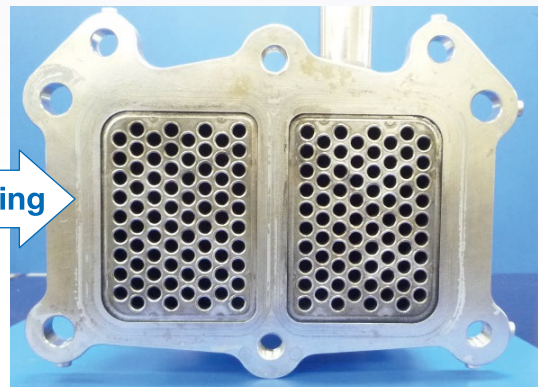

#### Solution proposed by JAPAN CHEMICAL INDUSTRIES

We analyzed the deposits and developed the optimal cleaning solution and cleaning method for dirt and rust. As a result, it was possible to reuse the part and the cost burden was greatly reduced.

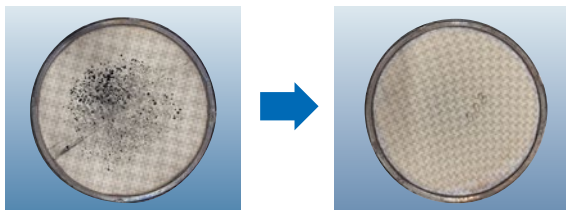

After cleaning

### Other examples

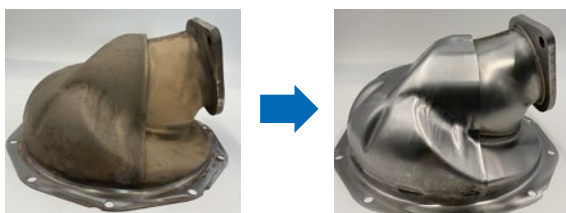

#### DPF

#### Paint remover

#### Rust remover
